Amplitude: does the world swing harder when it swings together?
A · Synchronization and swing size move together
r
amplitude A
year
B · r vs A: ρ=+0.51, p=0.0006 vs 5,000 surrogates
amplitude A
synchronization r
C · Two-stage: world lines up first (t−1), then swings peak (t0)
r
amplitude A
years relative to global-recession onset
