Index of every figure

Every graph made for Economic Fibrillation up to 11 October 2026: 53 analysis figures in seven figure books, plus the 31 economy dashboards of the atlas (book 08). Each figure is stored once, in figures/NN_<category>/, as a PNG and, where it was drawn as a vector, a PDF. Status: 14 current, 5 need relabelling, 6 use the windowed-Hilbert convention, 22 are superseded history, 5 are descriptive atlas figures and 1 draws a series that matches no stored results file. Lost with the September workspace and not recoverable: the restoring-time figure from csd_fast.py and the plotting scripts for the companion figures, F4.3, F7.1 and F7.2 (their results files survive and reproduce exactly).

Status key

CURRENT	Paper data (Maddison 2023) and the paper's conventions; numbers match docs/methods.md.
NEEDS RELABELLING	Numbers right, but an annotation on the figure is out of date (said in the caption).
CONVENTION W	Hilbert transform applied to 1970–2022 only (convention W); the paper uses P.
SUPERSEDED	Earlier data or crisis definition; the record of how the paper got here.
DESCRIPTIVE	Atlas material from the Global Macro Database; describes, does not test.
UNVERIFIED SERIES	The series drawn matches no stored results file; redraw before use.

Book 01 · Method: from GDP to oscillators

F1.1	From growth to phase: the measurement pipeline (Japan)	CURRENT
F1.2	All 26 economies as oscillators	CURRENT
F1.3	The Kuramoto order parameter $r(t)$, 1970–2022	CURRENT
F1.4	The real world is far more synchronized than chance	UNVERIFIED SERIES
F1.5	First pass: the Hilbert pipeline on current-dollar GDP (Japan)	SUPERSEDED
F1.6	First pass: all 26 economies on current-dollar GDP	SUPERSEDED
F1.7	First pass: $R(t)$ on current-dollar GDP, 1970–2023	SUPERSEDED
F1.8	First pass: real synchronization against 5,000 surrogates	SUPERSEDED
F1.9	First pass: Monte Carlo convergence of the surrogate p-value	SUPERSEDED
F1.10	First pass: where the real R sits in the chance distribution	SUPERSEDED

Book 02 · The crisis arc: synchronization around global recessions

F2.1	Synchronization against Kose–Terrones global recessions and downturns	CURRENT
F2.2	Mean synchronization by period type	CURRENT
F2.3	Does synchronization lead global recessions?	CURRENT
F2.4	The fibrillation signature: rise, peak and shatter (superposed epoch, n = 5)	CURRENT
F2.5	The tested arc: two years before to two years after	CURRENT
F2.6	Leave-one-crisis-out: the lead is carried by 2009 and 2020	CURRENT
F2.7	Companion version: synchronization against recessions and downturns	CONVENTION W
F2.8	Companion version: rise, peak and shatter	CONVENTION W
F2.9	Companion version: the tested arc (not significant under W)	CONVENTION W

Book 03 · How the crisis definition was chosen (history)

F3.1	Current dollars: synchronization with hand-picked crisis windows	SUPERSEDED
F3.2	Current dollars: each global crisis, zoomed	SUPERSEDED
F3.3	Current dollars: composite around global-crisis onsets	SUPERSEDED
F3.4	Current dollars: global-crisis windows against randomly placed windows	SUPERSEDED
F3.5	Current dollars: mean synchronization by period type	SUPERSEDED
F3.6	Real GDP: synchronization with the same hand-picked windows	SUPERSEDED
F3.7	Real GDP: each global crisis, zoomed	SUPERSEDED
F3.8	Real GDP: composite around global-crisis onsets	SUPERSEDED
F3.9	Real GDP: global-crisis windows against randomly placed windows	SUPERSEDED
F3.10	Real GDP: mean synchronization by period type	SUPERSEDED
F3.11	Banking crises: synchronization against banking-crisis intensity $C(t)$	SUPERSEDED
F3.12	Banking crises: lead–lag profile	SUPERSEDED
F3.13	Banking crises: synchronization around banking-crisis onsets	SUPERSEDED
F3.14	Banking crises: the one crisis that went global began at peak synchronization	SUPERSEDED
F3.15	Two crisis definitions, two verdicts	SUPERSEDED
F3.16	Synchronization–crisis correlation by timing, both definitions	SUPERSEDED

Book 04 · What moves in a crisis: swing size, alignment and diversification

F4.1	Amplitude: does the world swing harder when it swings together?	CONVENTION W

F4.2	Companion version: the world swings harder when it swings together	CONVENTION W
F4.3	The fibrillation identity: world swing = national swing × alignment	CURRENT
F4.4	Loss of diversification (GDP-weighted)	NEEDS RELABELLING
F4.5	Loss of diversification under both weightings	NEEDS RELABELLING
F4.6	Companion version: loss of diversification	NEEDS RELABELLING
F4.7	Companion version: robust to the weighting scheme	NEEDS RELABELLING

Book 05 · Network geometry and phase structure

F5.1	Correlation-network topology: the minimum spanning tree of 26 business cycles	NEEDS RELABELLING
F5.2	Companion version: the network has tightened about twice since the 1980s	CURRENT
F5.3	Pairwise phase lags: is there an epicenter?	CONVENTION W

Book 06 · Tipping tests: the honest nulls

F6.1	Critical slowing down of synchronization: null	CURRENT
F6.2	Kuramoto coupling as the bifurcation parameter: no slowing	CURRENT

Book 07 · Inside the economies: channels and global forces

F7.1	Inside two economies: the United States and Japan	DESCRIPTIVE
F7.2	Anatomy of a global recession: which channel synchronizes, and when	CURRENT
F7.3	Global forces I: growth, oil, trade, inflation and synchronization by channel	DESCRIPTIVE
F7.4	Global forces II: interest rates, the dollar and crisis onsets	DESCRIPTIVE
F7.5	The 26 side by side: coupling by decade and growth in each recession	DESCRIPTIVE
F7.6	The five added economies: coupling to the 26 and growth in each recession	DESCRIPTIVE

Book 08 · Country atlas: 31 economy dashboards

F8.1–F8.31	One dashboard per economy: United States, Canada, Mexico, Germany, France, United Kingdom, Italy, Netherlands, Belgium, Austria, Switzerland, Sweden, Norway, Denmark, Finland, Spain, Portugal, Greece, Turkey, Japan, South Korea, Australia, India, Indonesia, Thailand, South Africa, China, Brazil, Saudi Arabia, United Arab Emirates, Iran	DESCRIPTIVE
